

Crawl Space Clean Up and Insulation Replacement

If rodents have damaged the insulation in your attic crawl space or the sub-floor area we can help you. We can remove soiled insulation, deodorize the area and add new insulation (that's formaldehyde free).

We can also install plastic ground vapor barriers, replace unscreened vents, and construct new crawl space access doors.

This service is available in Western Washington only from the Canadian Border south through Puyallup.

For a free written estimate give us a call.
